

StationMD

The Telehealth Solution Serving
Individuals With Intellectual and
Developmental Disabilities

What Is StationMD?

StationMD was founded by ER doctors who recognized a need for better quality care for individuals with intellectual and developmental disabilities (I/DD). Our team of board certified doctors deliver superior medical care to people with I/DD in their home settings through easy to use telehealth technology: a tablet, high-definition camera, and Bluetooth stethoscope. Our physicians all have a special commitment to caring for people with I/DD and have dedicated training in this area.

What This Means For You And Your Loved Ones?

We understand that the “trauma of transfer” and exposure to infection aside, the ER can be particularly frightening and disorienting. A daily routine of meals, activities, sleeping, and medications is disrupted as well.

Now, with StationMD your loved one has quick and easy access to a highly specialized doctor from the comfort of their home setting 24 hours a day. The doctor will be able to communicate with the individual, caregiver, any additional family members, and other pertinent physicians caring for your loved one all at the same time. If a visit to the ER is needed, the StationMD doctor will call the ER to provide the medical history and reason for the visit (i.e. x-ray only) to help expedite the visit as much as possible.

How It Works? A simple phone call starts the process
